⚠ WARNING

Weight and Dimensions shown are approximate.

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

1. Safety Precautions

1.1. General Guidelines

- 1. When servicing, observe the original lead dress. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
- 2. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers shields are properly installed.
- 3. After servicing, make the following leakage current checks to prevent the customer from being exposed to shock hazards.

1.2. Touch-Current Check

- 1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
- 2. Connect a measuring network for touch currents between each exposed metallic part on the set and a good earth ground such as a water pipe, as shown in Figure 1.
- 3. Use Leakage Current Tester (Simpson 228 or equivalent) to measure the potential across the measuring network.
- 4. Check each exposed metallic part, and measure the voltage at each point.
- 5. Reserve the AC plug in the AC outlet and repeat each of the above measure.
- 6. The potential at any point (TOUGH CURRENT) expressed as voltage U₁ and U₂, does not exceed the following values:

For a. c.: $U_1 = 35 \text{ V (peak)}$ and $U_2 = 0.35 \text{ V (peak)}$;

For d. c.: $U_1 = 1.0 \text{ V}$,

Note:

The limit value of $U_2 = 0.35$ V (peak) for a. c. and $U_1 = 1.0$ V for d. c. correspond to the values 0.7 mA (peak) a. c. and 2.0 mA d. c.

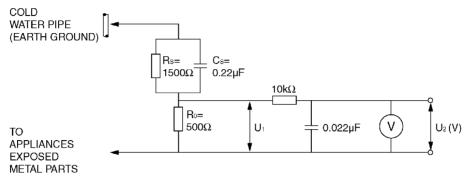

The limit value $U_1 = 35 \text{ V}$ (peak) for a. c. correspond to the value 70 mA (peak) a. c. for frequencies greater than 100 kHz.

7. In case a measurement is out of the limits specified, there is a possibility of a shock hazard, and the equipment should be

repaired and rechecked before it is returned to the customer.

Resistance values in ohms (Ω)

V: Voltmeter or oscilloscope (r.m.s. or peak reading)

> Input resistance: $\geq 1 \text{ M}\Omega$ Input capacitance: < 200 pF

Frequency range: 15 Hz to 1 MHz and d.c. respectively

NOTE - Appropriate measures should be taken to obtain the correct value in case of non-sinusoidal waveforms.

2. Prevention of Electro Static Discharge (ESD) to Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by electro static discharge (ESD).

- 1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, whichshould be removed for potential shock reasons prior to applying power to the unit under test.
- 2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as alminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
- 3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
- 4. Use only an anti-static solder removal device. Some solder removal devices not classified as "anti-static (ESD protected)" can

generate electrical charge sufficient to damage ES devices.

- 5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
- 6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, alminum foil or comparableconductive material).
- 7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

Caution

Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.

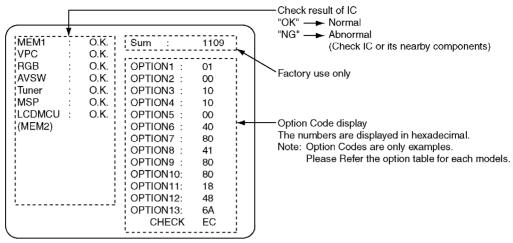

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise hamless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity (ESD) sufficient todamage an ES device).

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are imporant for safety. These parts are marked by Δ in the schematic diagrams, Exploded Views and replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire, or other hazards. Do not modify the original design without permission of manufacturer.

3. Self Check

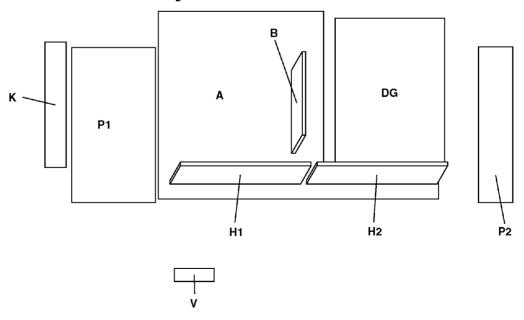

- 1. Self-Check is used to automatically check the bus lines and hexadecimal code of the TV set.
- 2. To get into the Self -Check mode press the Down () button on the customer controls at the front of the set, at the same time pressing the Recall button on the remote control, andthe screen will show:

If the CCU ports have been checked and found to be incorrect or not located then "--" will appear in place of "O.K.".

5. Servicing method

5.1. Removing tilt base

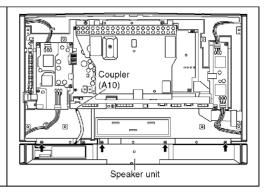

5.2. Removing rear panel

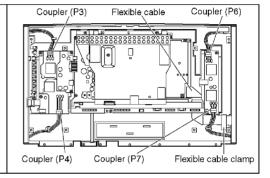

5.3. Removing speaker unit

- Remove the rear panel. (See 5.2.)
 Remove the fixing screws (4pcs).
 Disconnect the coupler (A10) and remove the speaker

5.4. Removing chassis

- Remove the speaker unit. (See 5.3.)
 Disconnect the couplers (P3, P4, P6 and P7).
 Disconnect the flexible cable, and unlock the flexible cable clamp to free the cable.

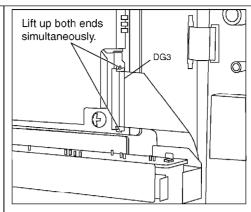

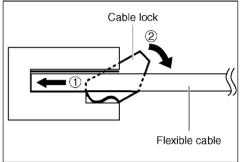

* Disconnecting flexible cable from the coupler
Lift up both ends of the cable lock (brown colored)
simultaneously to release the locking. Once the flat
cable is disconnected from the coupler, the cable lock
tends to detach from the coupler easily. Due
precaution should be paid on it.

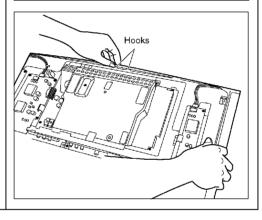

* Reconnecting flexible cable to the coupler Attach the cable lock (brown) to the coupler (white) with its both ends being pulled up. Insert the flat cable into the coupler over the cable lock until the cable stops firmly at the coupler end. Press down both ends of the cable lock until their upper faces are positioned flat to lock the cable.

* The LCD panel is left lay on the front panel. (The LCD panel is easily removable.) Be careful not to damage the LCD panel.

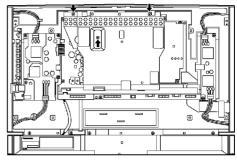

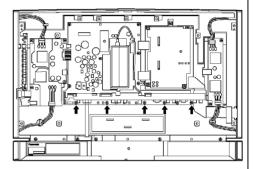

5.5. Removing A-Board

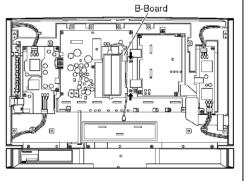

- Remove the rear panel. (See 5.2.) Remove the fixing screws (3pcs). Lift up the upper part of the main shield and detach it while disengaging the hooks (3 locations) at the lower part.

8.1. **Schematic Diagram Notes**

Notes:

Important Safety Notice Components identified by Δ mark have special characteristics important for safety. When replacing any of these components, use only manufacture's specified parts. 1. Resistor All resistors are cabon 1/4W resistor, unless marked as follows: Unit of resistance is OHM $[\Omega]$ (K=1,000, M=1,000,000). : Metal Oxide : Nonflammable : Metal Film : Solid \bigcirc Δ : Wire Wound : Fuse: \otimes 2. Capacitor All capacitors are ceramic 50V capacitor, unless marked as follows: Unit of capacitance is μF , unless otherwise noted. : Temperature Compensation : Electrolytic : Bipolar \widehat{M} : Polyester NP B : Metalized Polyester : Dipped Tantalum (m)(T) : Polypropylene : Z-Type 3. Coil Unit of inductance is μF , unless otherwise noted. 4. Test Point : Test Point position 5. Earth Symbol : Line Earth (Hot) 6. Voltage Measurement Voltage is measured by a DC voltmeter. Conditions of the measurement are the following: Power Source AC 110-240V, 50/60Hz Receiving Signal Colour Bar signal (RF)

7. Number in red circle indicates waveform nember.

(See waveform pattern table.)

8. When arrow mark (/) is found, connection is easily found from the direction of arrow

- 9. Indicates the major signal flow. : Video → Audio ⇒
- 10. This schematic diagram is the latest at the time of printing and subject to change without notice.

Remarks:

1. The Power Circuit contains a circuit area which uses a separate power supply to isolate the earth connection.

The circuit is defined by HOT and COLD indications in the schematic diagram. Take the follwing precautions.

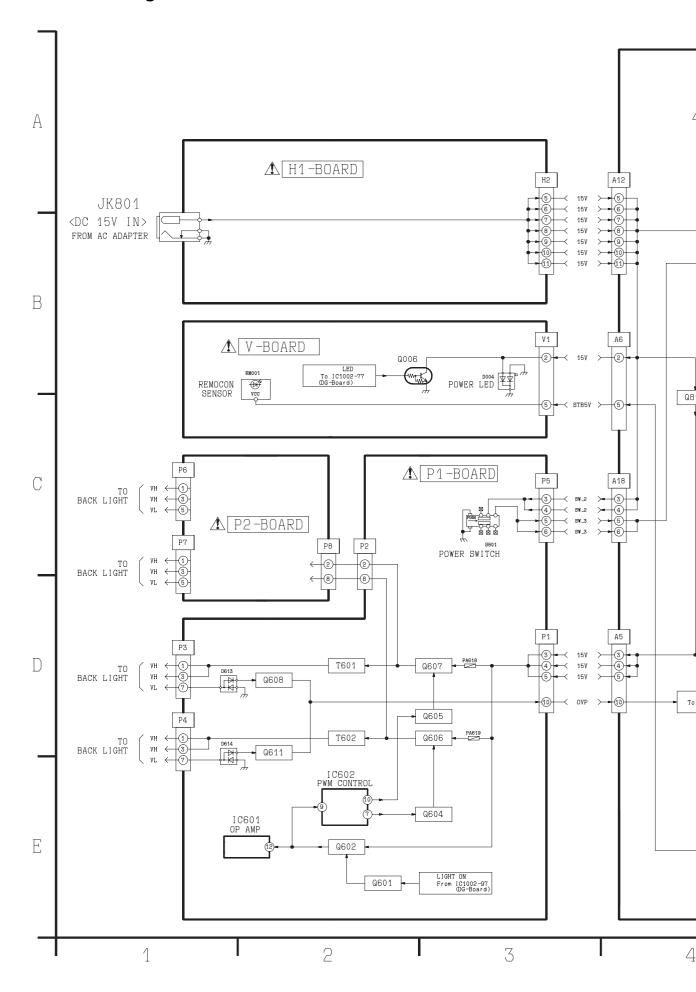

All circuits, except the Power Circuit, are cold.

Precautions

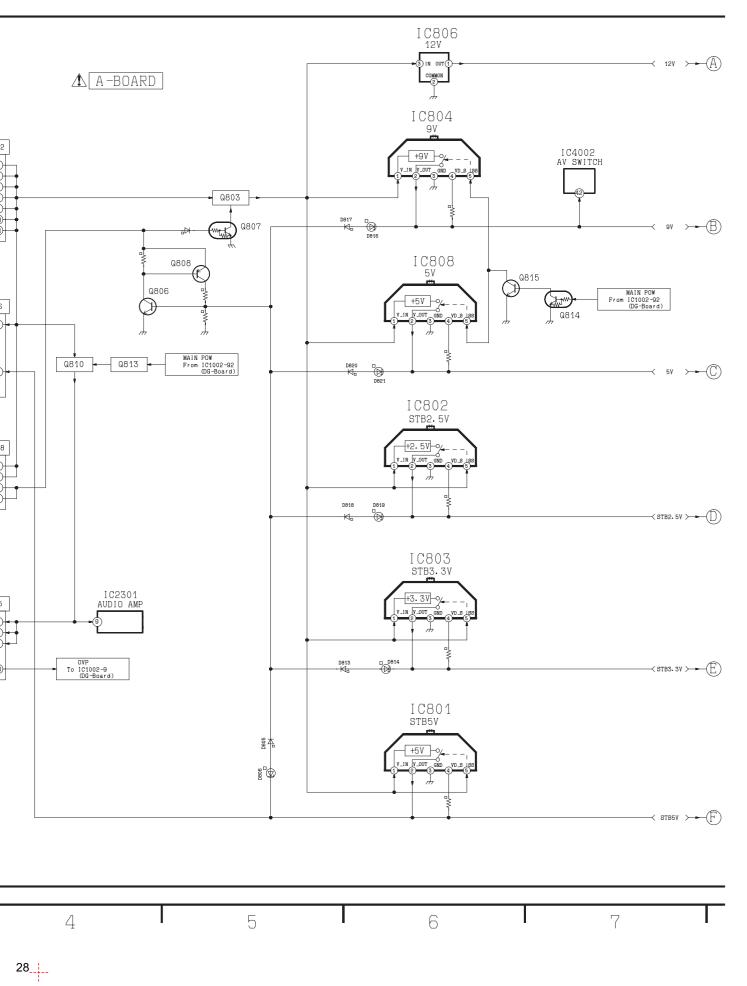

- a. Do not touch the hot part or the hot and cold parts at the same time or you may be shocked.
- b. Do not short- circuit the hot and cold circuits or a fuse may blow and parts may break.
- c. Do not connect an instrument, such as an oscilloscope, to the hot and cold circuits simultaneously or a fuse may blow.
 Connect the earth of instruments to the earth connection of the circuit being measured.
- d. Make sure to disconnect the power plug before removing the chassis.
- 2. Following diodes are interchangeable.
